Mission and Goals

The Art Institute of Tampa, a branch of Miami International University of Art & Design, is a career-oriented institution that provides students with academic preparation and practical skills through programs in the applied arts and design industries. The institution prepares its undergraduate students for entry-level positions and its graduate students for advancement in their chosen fields. The Art Institute of Tampa is dedicated to fostering a culture that encourages creativity, research, and learning-centered endeavors.

Goals:

- 1 To provide students at all degree levels with the theory, knowledge, and skills appropriate to their disciplines, including an undergraduate grounding in foundational studies and general education.
- 2 To help students identify their career goals and develop the professional skills to achieve them.
- 3 To utilize a continuous quality improvement process to enhance student learning and university success.
- 4 To recruit and retain qualified faculty with the appropriate academic credentials and professional experience to promote a learning-centered environment.

Approach and Direction

Based on the areas of opportunities outlined in the conclusion of the building’s audit and the missions and goals of The Art Institute of Tampa, the following recommendations, design decisions, and implementations have been proposed.

First and foremost, the building is in need of a vast overhaul to its wayfinding system. The current system will be improved through the addition of new directional signage which will be place at key junctions. The main purpose of these new signs is to alleviate the problems that stem from the strange room numbering sequence (most notably on the second floor).

Second, the aesthetics of the space leave a lot to be desired, feeling neither creative nor professional. The second objective is to create a unique place rather than an ordinary space.

One of the chief goals of The Art Institute of Tampa is to stimulate creativity. Currently, the walls are jumbled with student’s work. While it is a step in the right direction, it is far from ideal. The work is haphazardly slapped upon cork boards, and it can often be difficult to determine who made what; what class it came from and why it was made.

The solution is an “endless display board” complete with moveable signs. The boards would span the hallway walls endlessly, only being interrupted by doors and windows. This is to accommodate various sized project displays as

some are forced into the allotted space, and on the other extreme, a board can be very sparse. This also creates a homogeny of the work as it will all appear as a singular collective. To facilitate easy identification of work a standardized sign system will be established following the school’s ‘Client, Problem/Objective, Process, Solution’ system (when applicable).

Another prime objective for the school is the preparation of students for the professional business of design. Students have difficulty treating school as if they were employees at a business (a key component to the school’s methodology). The solution is to create a professional looking and feeling atmosphere while staying true to the above mentioned goal of stimulating creativity. This will be achieved through the use of materials and design elements for existing and new elements and fixtures including, but not limited to: doors, flooring, walls, window treatments, furnishings, and signage.

Finally, while it is not something that will be addressed by separately, it is important to note that the AiTa brand will play a major part in the design. The brand will be incorporated into strategic elements so as to remind and reinforce where visitors are (The Art Institute of Tampa) without inundating them with brand overload.

Design Application

Following the outlined design direction, the building’s central wayfinding system would be greatly overhauled, and work in tandem with the overall aesthetics of the building to create a creative, inspirational, and professional environment.

To create a professional environment the flooring throughout the hallways and classrooms would be replaced with an ebony hardwood floor, much like that which is already in use in the school’s gallery. All of the standard room doors would be replaced with wooden doors stained white. All windows and glass doors the show into an interior room would be replaced with frosted glass. This coupled with the white walls would create a sense of structure and stability, which are important factors as to what makes an environment feel professional. Furthermore, the frosted windows solves a problem that exists wherein students are often distracted by things that happen in the hallways to the point that a class becomes interrupted.

All of the wayfinding signage, indicators and references would be Art Institute red. All other surfaces would be white with the exception of the floor and a few metal elements. This creates an extreme contrast and lets the wayfinding double as the main decorative design element. The only other source of color would come from the student work that would line the halls on the new and invisible “endless” display boards. Strong vertical elements would draw the eye towards important signage.

The signage and indication elements themselves would be hard-edged amorphous shapes, modeled as through they were squares and rectangles that freely floated in space with each corner floating independently of one another, and then frozen in time. This creates a lofty almost weightless feeling designed to impart creativity and openness into the people traversing the building.

The final element is a vertical stripe that runs the full length of the walls in the hallways. This line serves as a “birthplace” of all signage with the majority of signage stemming from this line. Its other purpose is to help stabilize the otherwise free form nature of the signage.

The wayfinding system will employ what is referred to as passive signage in both the form of arrival signage (indicating an arrival to a destination) and passive directories, which lead people without them having to actively use (stop and read) the signage.

The type is a more contemporary take on the overdone standard of Helvetica. This is done by using Helvetica black tightly tracked as the primary. Helvetica takes on the personality of the way its displayed, so when presented in a fun lively way, it takes on those characteristics. The hierarchy of the weights are easy and simple, as things take a step down in importance they become lighter. Further, the roman weight is required for the tactile area of the signs to conform with ADA standards.

The color palette is based on The Art Institute of Tampa’s brand colors and is used in an extreme high contrast manner. This creates a striking and engaging visual presence.

Red Vinyl

(Page Intentionally Left Blank)

The larger of the two monumental signs will be placed on the corner of Himes and MLK. This sign, due to location, has to serve not only The Art Institute of Tampa and the International Culinary School, but South University and the business park the building resides in.

The Art Institute of Tampa resides at the top of the sign as well as in the largest segment, giving it priority in the visual hierarchy. The landmarks would be illuminated channel lettering with back lights to illuminate the black characters. The color of each block is representative of its school's respective brand.

The smaller of the two monumental signs will be placed on the hill beside the entrance to the school. This sign, due to location, has to serve not only The Art Institute of Tampa and the International Culinary School, but South University as well. The business park does not need to be represented as there is a monumental sign in the entrance's median; this location was not available for the this sign, but was the desired location.

The Art Institute of Tampa resides at the top of the sign as well as in the largest segment, giving it priority in the visual hierarchy. The landmarks would be illuminated channel lettering with back lights to illuminate the black characters. The color of each block is representative of it's school's respective brand.

Following the design outlined above, the visitor parking space markers feature a pole that is not plum on any side with an uneven top. The sign itself is the white element that snakes around the red pole. The text on the sign is large and easy to read at the distance a visitor would be from the sign when driving in the parking lot. This is also a critical location to enforce the brand, as it is the first time most people will actually be interacting with the brand. The landmark is visible yet unobtrusive.

Branding

Maps with key POI highlighted
and numbered

Directory with
corresponding numbers

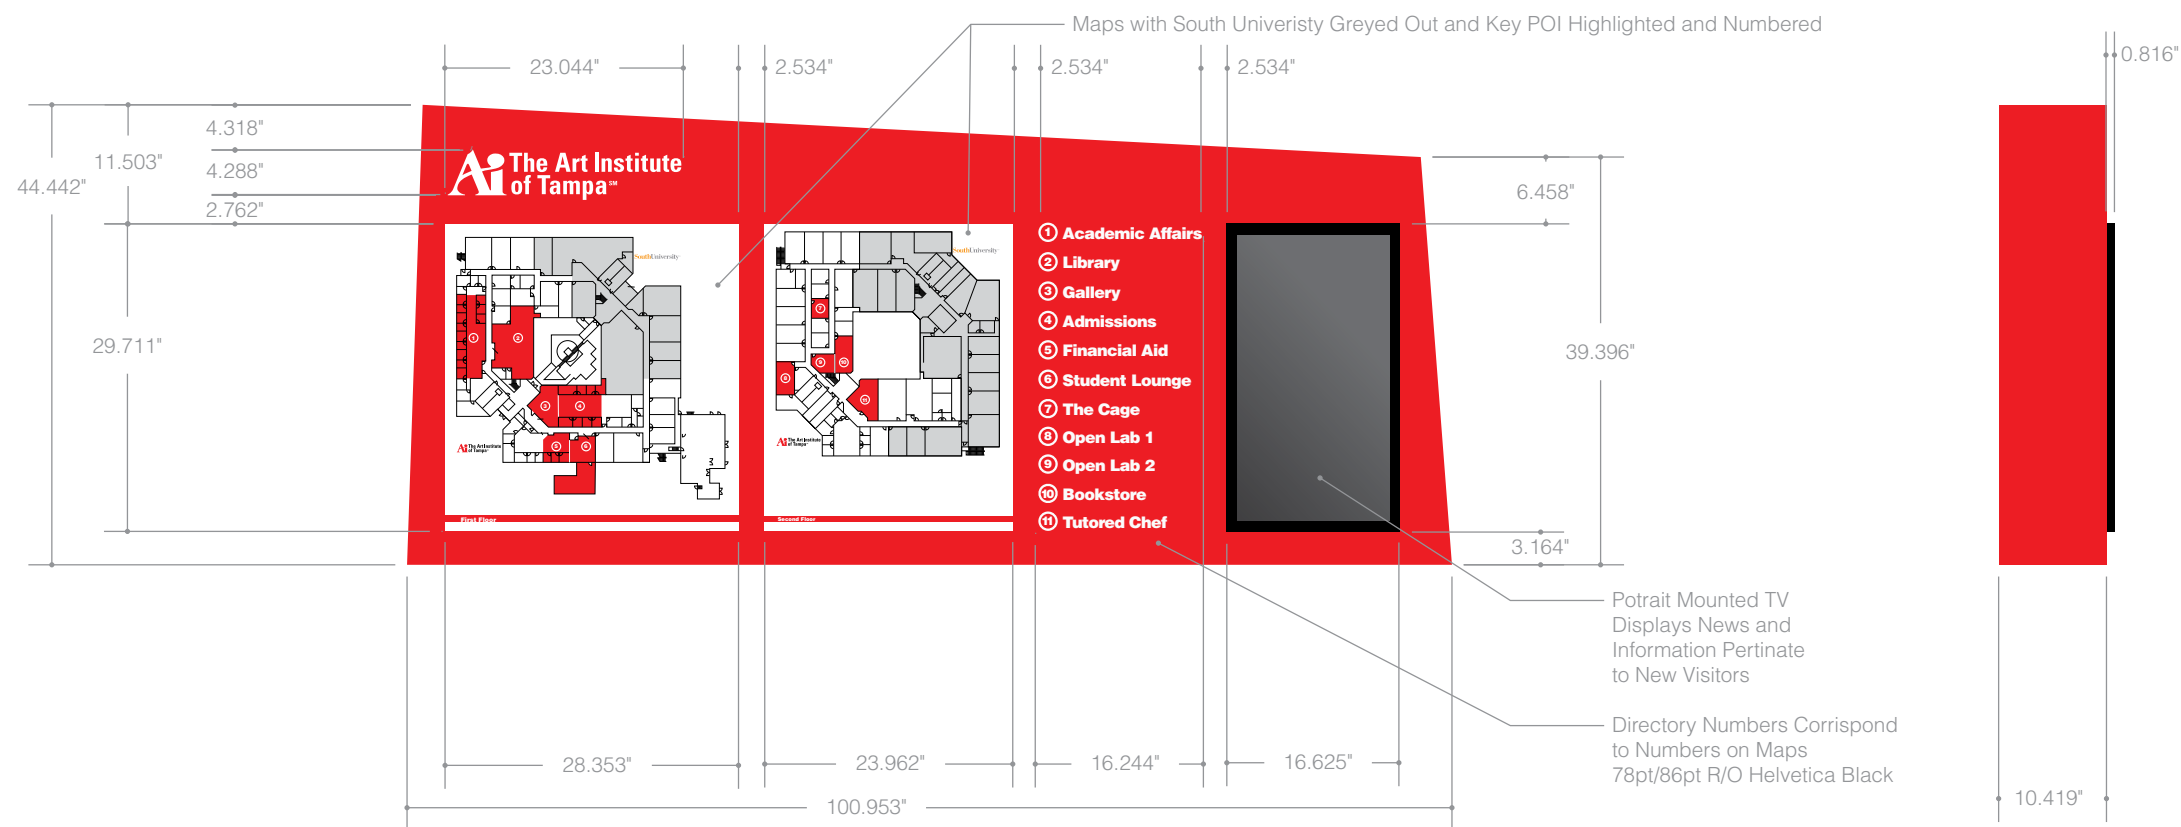

Digital display for print items
that were in the paperflex

The display case at the entrance will be replaced with a point of interest directory. The sign features maps of the first and second floor, with the POI highlighted and numbered, and a directory with corresponding numbered directory beside it; to the right of those is a TV which will display promotional material, news, and events.

The sign will be constructed out of light weight aluminum powder coated red and white.

In order to draw attention to the key signage at any given classroom door (room number and lab hours) a large vertical shape running from the floor to just shy of the ceiling would be placed behind the signs. On the front of all doors would be a passive arrival sign, indicating the room's number. Passive directories would be placed at key decision points. The existing branding at doorways will be left intact, as it blends well with the new system.

The walls will be fitted with flush mounted display boards made of homosote and painted white to blend with the walls. These boards would continue endlessly until obstructed by a door, window or corner; maximizing display space. Moreover, homosote doubles as a sound insulator, reducing classroom distractions.

White Wood

Frosted Glass

Aluminum

Red Vinyl

The revised room number signage eliminates the need for most of the extra signs that were at the doors. This is achieved by defining the rooms function or purpose under the visual representation of the rooms number.

The sign would be constructed in two parts, an aluminum shell and a frosted glass plate that slides into the slot in the aluminum and is secured with a hex bolt. The glass will have a red vinyl stripe with the room number cut out of it and the room's function bellow it in black vinyl.

The sign conforms to all ADA standards, as such in the lower aluminum face of the sign there are the tactile elements—raised lettering and braille. Also, the sign will be mounted 58 inches (center) from the ground.

The paperflex would be constructed in two parts, an aluminum shell and a clear glass plate that slides into the slot in the aluminum and is secured with a hex bolt. The paper would be slid between the glass and the shell. While this makes changing the contents difficult, the information within the paperflexes are only changed once every eleven weeks.

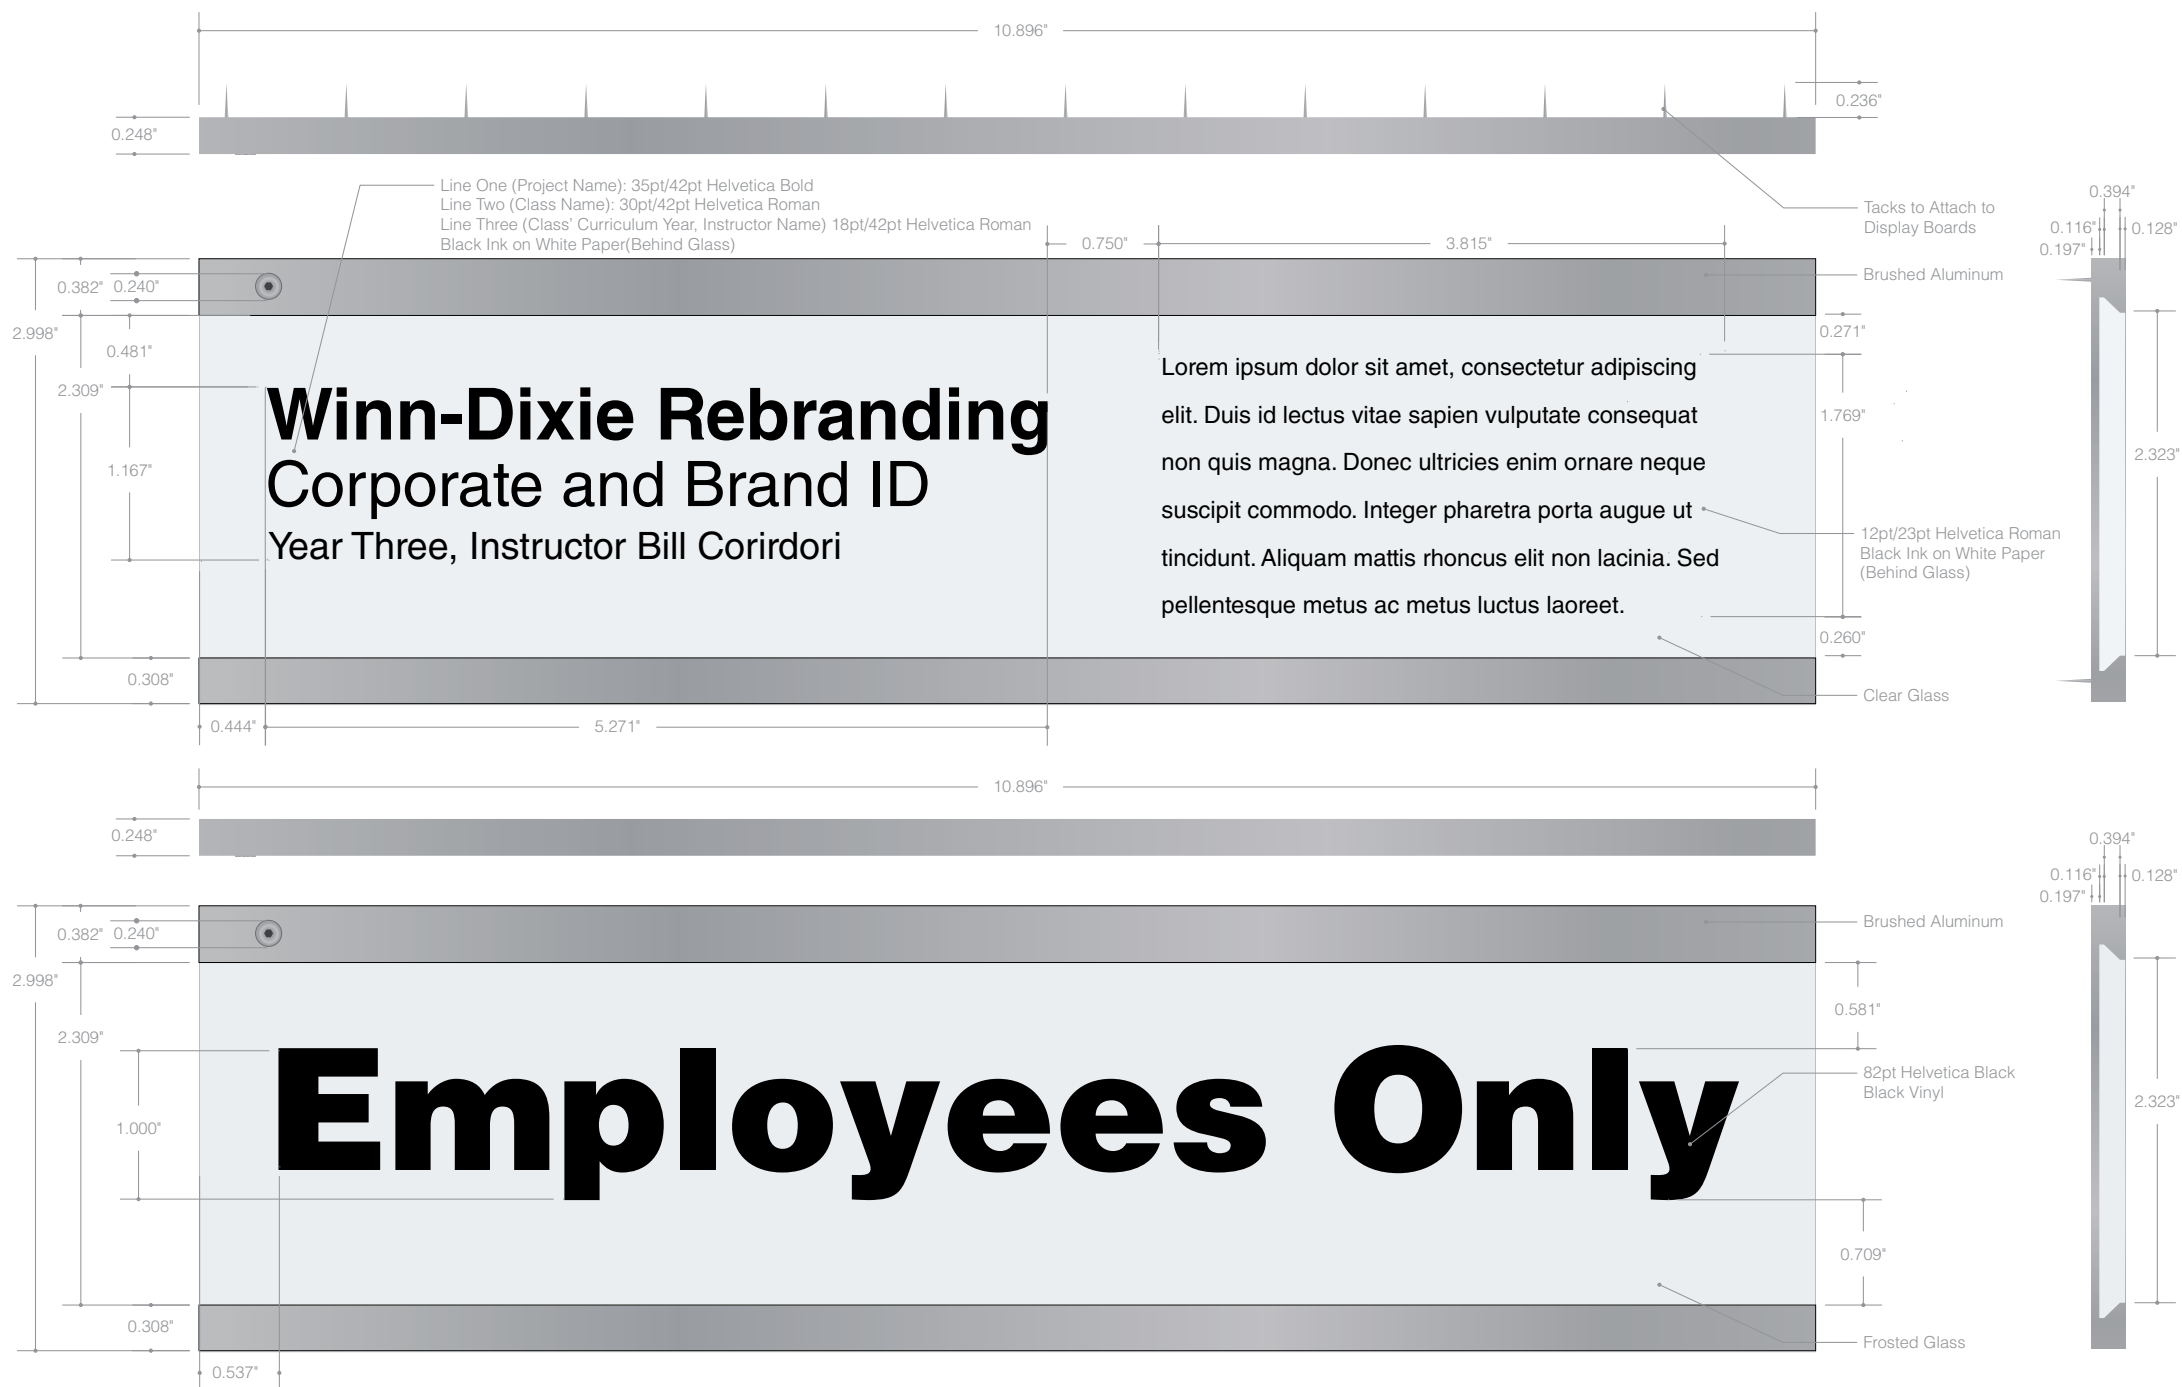

Clear Glass

Aluminum

Cut into the horizontal stabilizing line would be the room number and a target graphic, indicating the arrival at the current location. This is part of the wayfinding system's passive indication system.

The movable signs for the display boards and the employees only signs are essentially the same. Both would be constructed in two parts, an aluminum shell and a glass plate that slides into the slot in the aluminum and is secured with a hex bolt.

The movable sign functions as a paperflex and thus is made from clear glass. In order to attach the sign to the display boards it has tacks on the back. There are many tacks to support the weight of the sign.

The employees only sign would be made of frosted glass and black vinyl lettering and does not have tacks on the back.

The passive directories contain either two or three locations that are in the immediate area and on that floor. The sign features encircled directional arrows.

The sign will appear to stem from the stabilizing line. The text and markers will be cut from the vinyl.

Red Vinyl

Keeping with the defined aesthetic, the elevators would be resurfaced white, with the controls and the indicators being the focus. Placed beside the elevator will be an active directory to facilitate the people leaving the elevators in finding their destination.

The bathrooms, which reside on either side of the elevator shaft, will rely on large pictograms as their identifiers as the text will reside in the corresponding room number sign.

White Wood

Frosted Glass

Aluminum

Red Vinyl

The active directories contain up to nine locations that are on that floor. The sign features encircled directional arrows and a strong and highly visible landmark. This is important as the space is shared with another school.

The sign will appear to stem from the stabilizing line and extent from the floor almost to the ceiling. The text and markers will be cut from the vinyl.

Red Vinyl

Identical in construction as the paperflexes, with the exception of the use of frosted glass. The new bathroom sign have no gender written on them, relying only on the pictogram. This is because the room number signs located at the bathrooms will have the textual representation of the room's gender on it.

The pictogram will be made of red vinyl applied to frosted glass, within an aluminum shell.

Frosted Glass

Aluminum

Red Vinyl

Identical in construction as the paperflexes, with the exception of the use of frosted glass. The new bathroom sign have no gender written on them, relying only on the pictogram. This is because the room number signs located at the bathrooms will have the textual representation of the room's gender on it.

The pictogram will be made of red vinyl applied to frosted glass, within an aluminum shell.

Frosted Glass

Red Vinyl

Identical in construction as the paperflexes, with the exception of the use of frosted glass.

The pictogram will be made of red vinyl with black vinyl text applied to frosted glass, within an aluminum shell.

Frosted Glass

Aluminum

Red Vinyl

In special locations (easily identified by glass doors) such as offices, and the library, the glass will be frosted and there will be a special location arrival sign, similar to a passive directory, which lists all the functions of that space. Space permitting, there will be a prominent display of The Art Institute of Tampa's landmark in linear configuration. This is important as the majority of special locations serve as key touch points for the brand.

White Wood

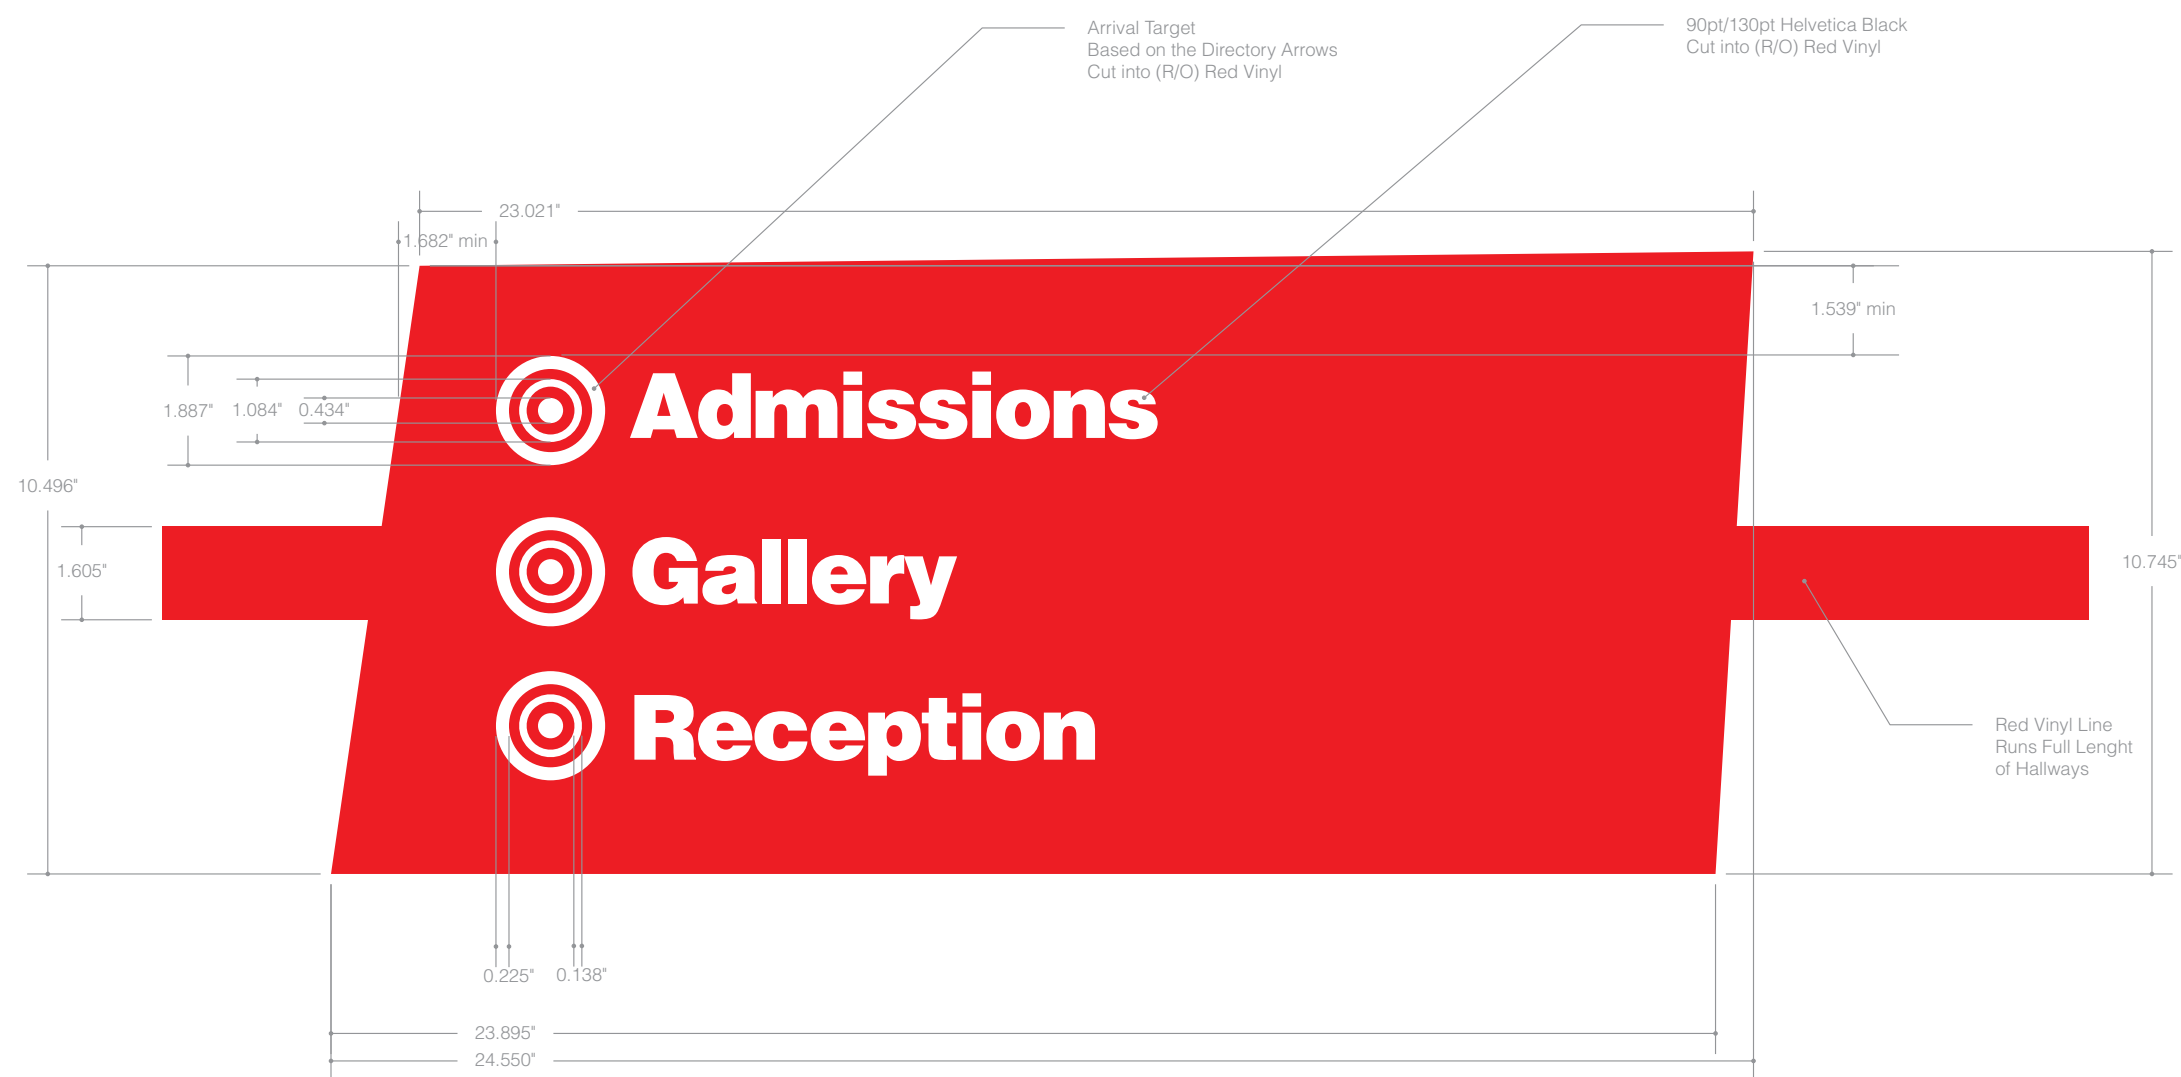

Frosted Glass

Aluminum

Red Vinyl

This is near identical to the passive directories, yet has a highly different function. The special location arrival signs contain either two or three descriptors of the location. These are used at locations where the small text within the room number sign is not prominent enough, such as offices and the supply store. The sign features encircled targets that function the same as the passive arrival signs.

The sign will appear to stem from the stabilizing line. The text and markers will be cut from the vinyl.

The only use of the brandmark as a separate sign will be on classroom hallway windows and on the doors that lead to special areas (offices, library, lounge, etc.)

The signs will be constructed of black and red vinyl.

Sign Type	Number	Size	Braille	Materials/Construction

Summary

Throughout the design process it was important that all of the design objectives were met, as they were of critical importance. The school had a number of issues, including but not limited to, its wayfinding and signage system, inconsistent branding, and no sense of place.

The goal of this design approach was to put the wayfinding system on display, it is the primary design element. This means the it not only needs to be well thought out and function at an exceptional level, but must also be aesthetically pleasing and engaging with the ability to invoke the desired emotions. Further compounding the challenge, is that the system must conform to strict ADA guidelines. The reason being, that it is not uncommon for all walks of people to use the building as outside events often use both the Tutored Chef and the atrium.

It is our belief that not only does this system meet, the goals set forth, but does it in an innovative way that could serve as a model for a new form of passive wayfinding (being noted for this would bring further attention to the school, possibly driving more people to visit the location). The system uses striking contrast and loose forms to create loftiness and invoke creativity—key feelings central to the previously mentioned goals.
